

XORBIT.

AI travel Planner

Vishnu Khechar Nihar Satish Hari Sai Ram

PROBLEM STATEMENT

Planning a trip frequently involves navigating through various websites and apps to gather information about hotels, weather, attractions, and travel routes, which can be both time-consuming .

For example: Rahul, a college student on a tight budget, spends hours checking hotel rates, weather, sights, and transport options, yet still struggles to create a solid itinerary.

- Need for multiple websites to plan a trip effectively.
- Challenges in managing travel expenses within a budget.
- Lack of automated or personalized itinerary generation.
- Poor integration of weather forecasts, and hotel details.

PROPOSED SOLUTION

ORBIT AI: REVOLUTIONIZING TRAVEL PLANNING

ORBIT AI is a state-of-the-art travel planning platform that makes trip organization easier. It uses artificial intelligence to create personalized itineraries based on user preferences like destination , travel dates , number of travelers , and budget.

This innovative tool saves users time by removing the need to search through various websites.

Unique Value Proposition (USP) :

- Weather predictions
- Suggestions for hotels
- Must-visit attractions
- Budget overview
- Route and map preparation

TECHNOLOGY AND STACK ARCHITECTURE

Page **04**

The ORBIT AI travel planner utilizes React.js, HTML5, CSS3, Tailwind CSS, and JavaScript to create a user-friendly interface. These technologies ensure a smooth and interactive experience, allowing users to easily input trip details and navigate the dashboard.

A Python or Node.js backend uses a REST API to process user inputs through an AI engine, integrating Weather and Maps APIs. This data is then synthesized into a personalized, interactive itinerary dashboard for the user

Architecture Components :

- User Interface (Web Application)
- AI Planning Engine
- Travel Data APIs
- Trip Dashboard & Map Visualization

DEMO & FEATURES

The ORBIT AI platform offers an interactive travel planning experience with features such as:

- Easy input for destination, travel dates, number of travelers, and budget
- Animated loading and real-time planning on the AI processing page
- A trip dashboard with weather updates, top destinations, hotel options, and budget breakdowns
- A detailed day-wise activity plan
- An interactive map for travel routes and transport modes

An AI travel chat feature for instant questions and plan adjustments

CHALLENGES AND FUTURE SCOPE

Page 06

challenges faced :

- Handling multiple APIs such as weather, maps, and hotels
- Designing an effective responsive travel dashboard
 - Creating realistic AI itineraries
 - Handling dynamic budget calculation

future scope :

- Real-time flight bookings
- Personalization with AI based on travel history
 - Creating a mobile app
 - Supporting multiple languages
- Providing live crowd and traffic prediction

**THANK
YOU**
